

Homework

Tweet-ulator

Imagine a world where all people talk each other via numbers and basic math operations. The discussion is starting by selection a first number. Every response contains a selected math operation (+, *, -, /) and another number.

Discussion can be threaded and has no limitations.

The task is to write backend and frontend application which will handle these business cases. UI can be anything, it is not a part of the task.

The main purpose of this homework is to check code writing skills, its design and explanation of architectural decisions.

- NodeJS
- TypeScript
- React
- Docker Compose
